

Problems
Our location is really beautiful space. Everything is all ready there. It is not important to build a new attraction, because attractions are all ready there. Problem of this space is that people which come here only take energy from this space and nobody is giving it back. We can take a lot of money and cultivate it, it will be beautiful. But after couple of years you can do it again.

Solution
I want your power of Internet. I want to create a community, which will clean this place. People which will make research of lines and map them. People which will make benches. People which take care about Sandberg. Young people, which will get older with Sand berg. People which take grandson to show him bench they build.

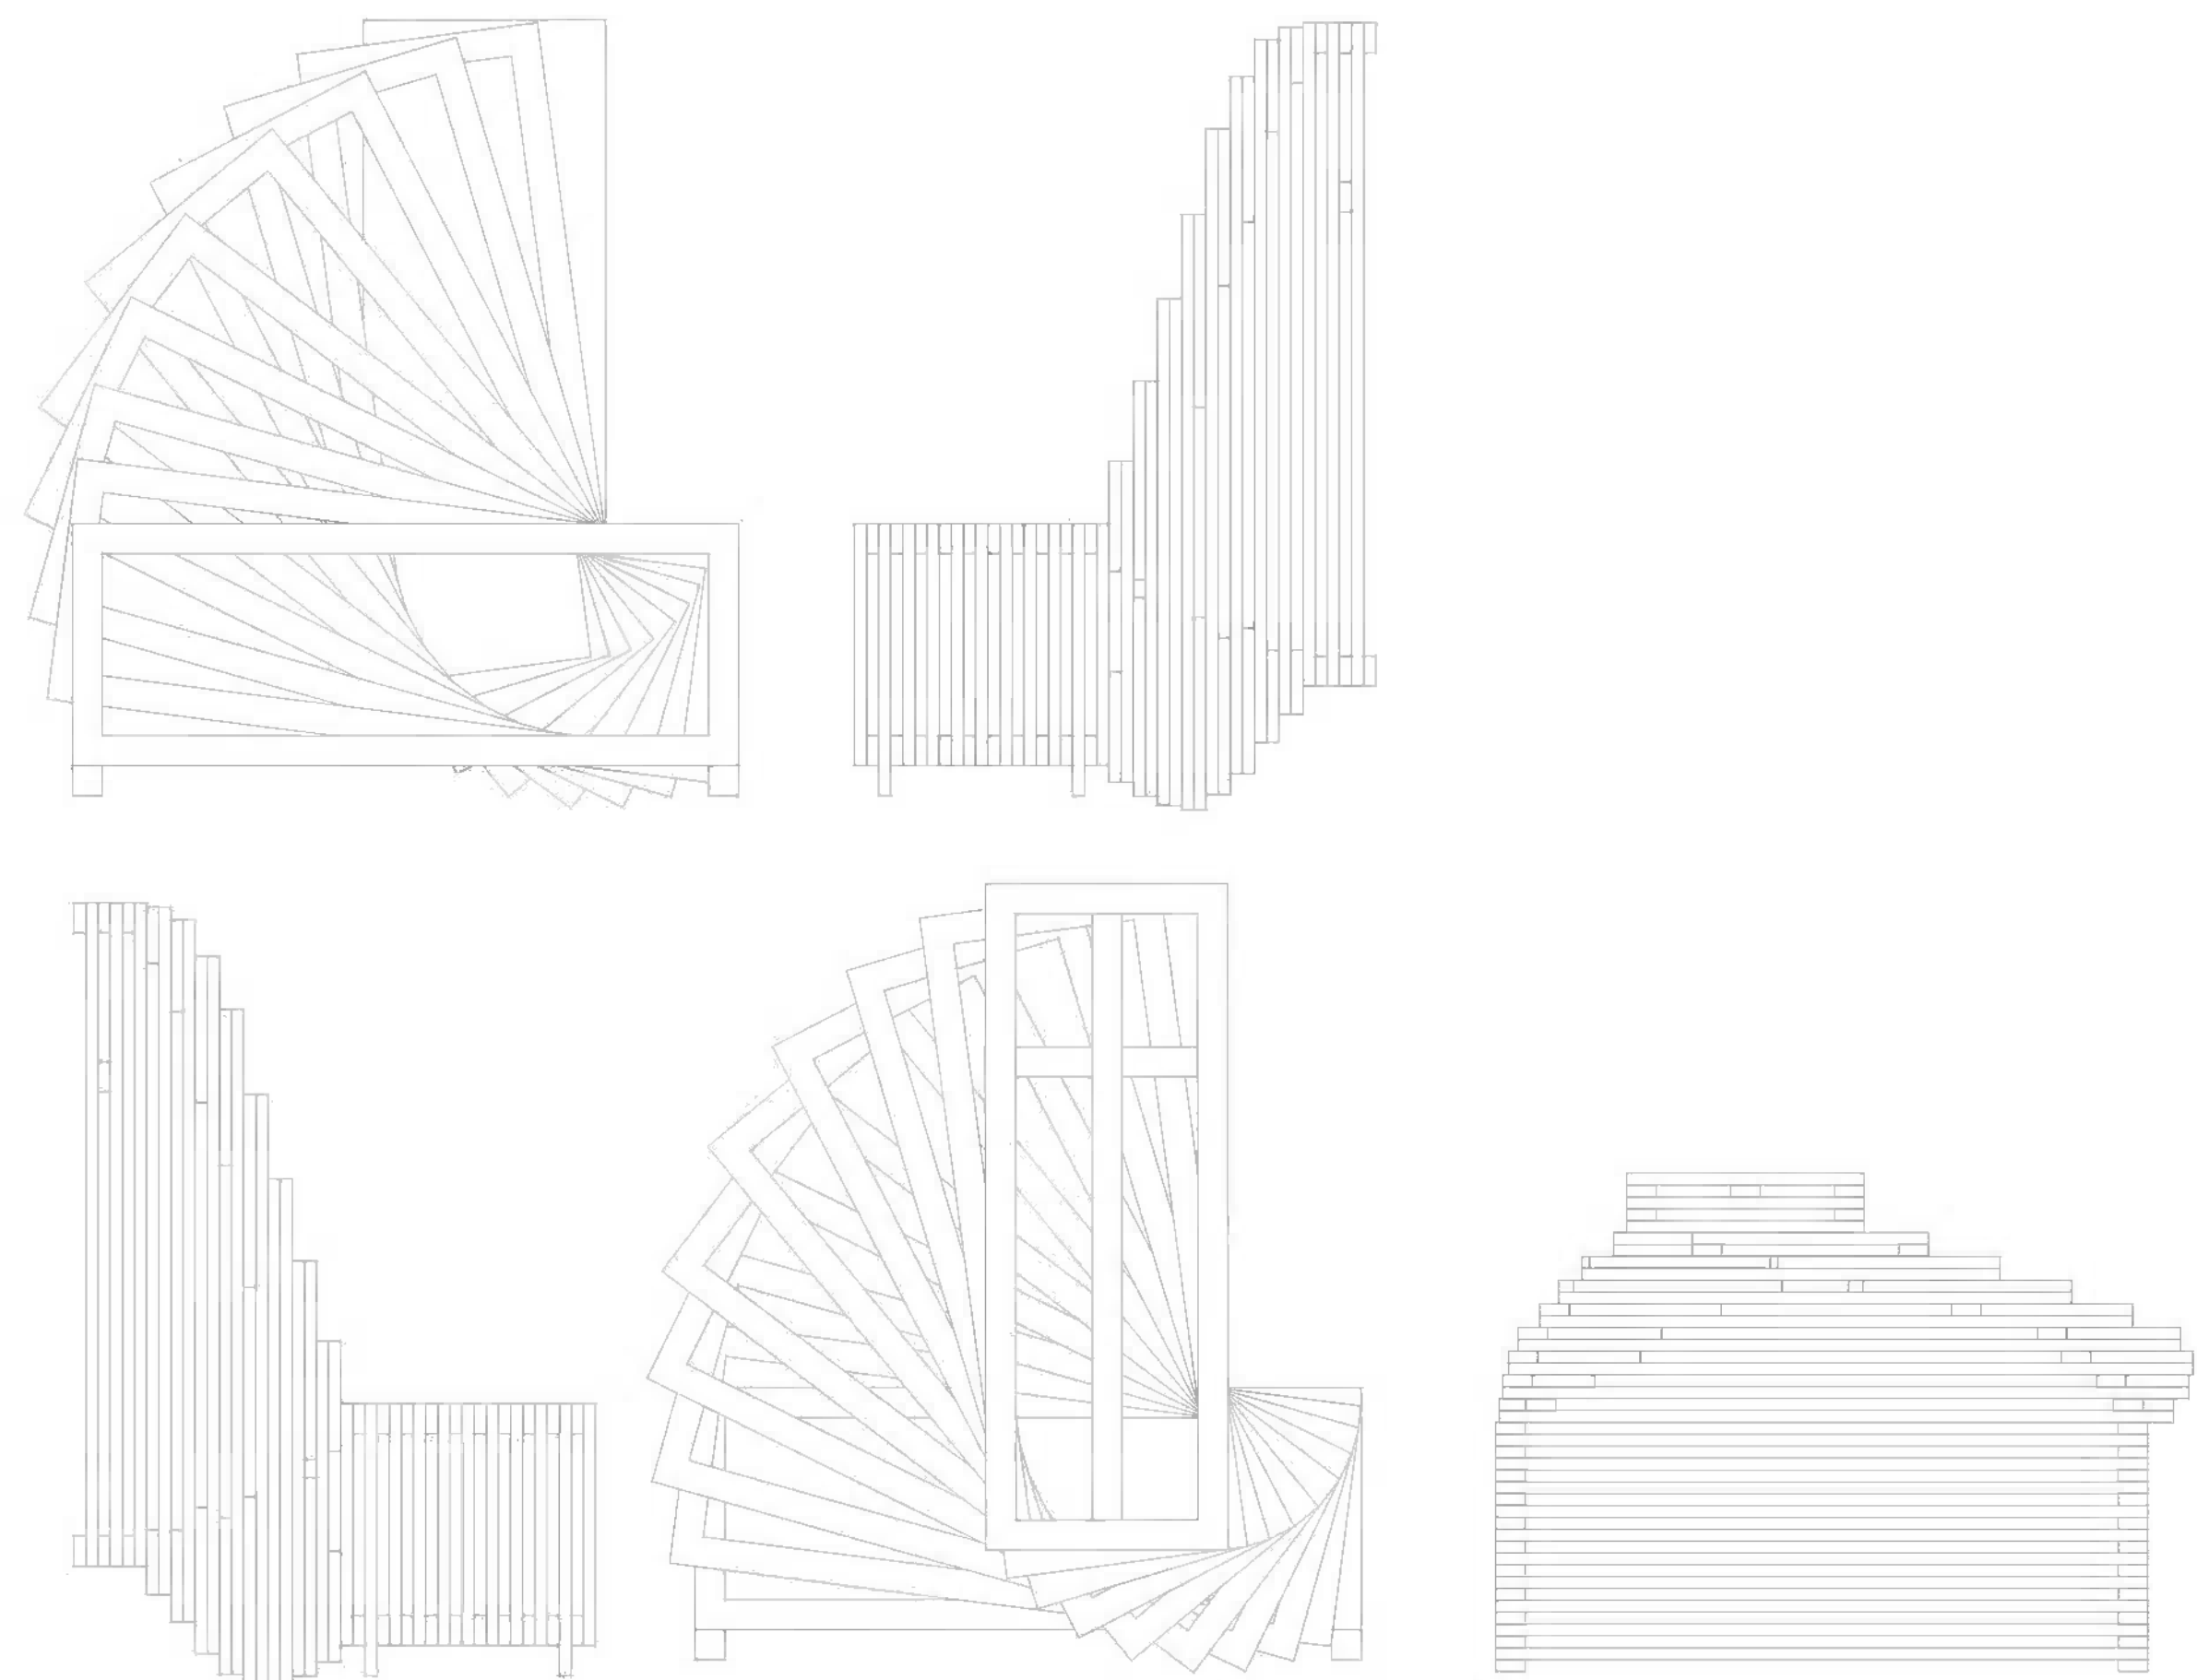

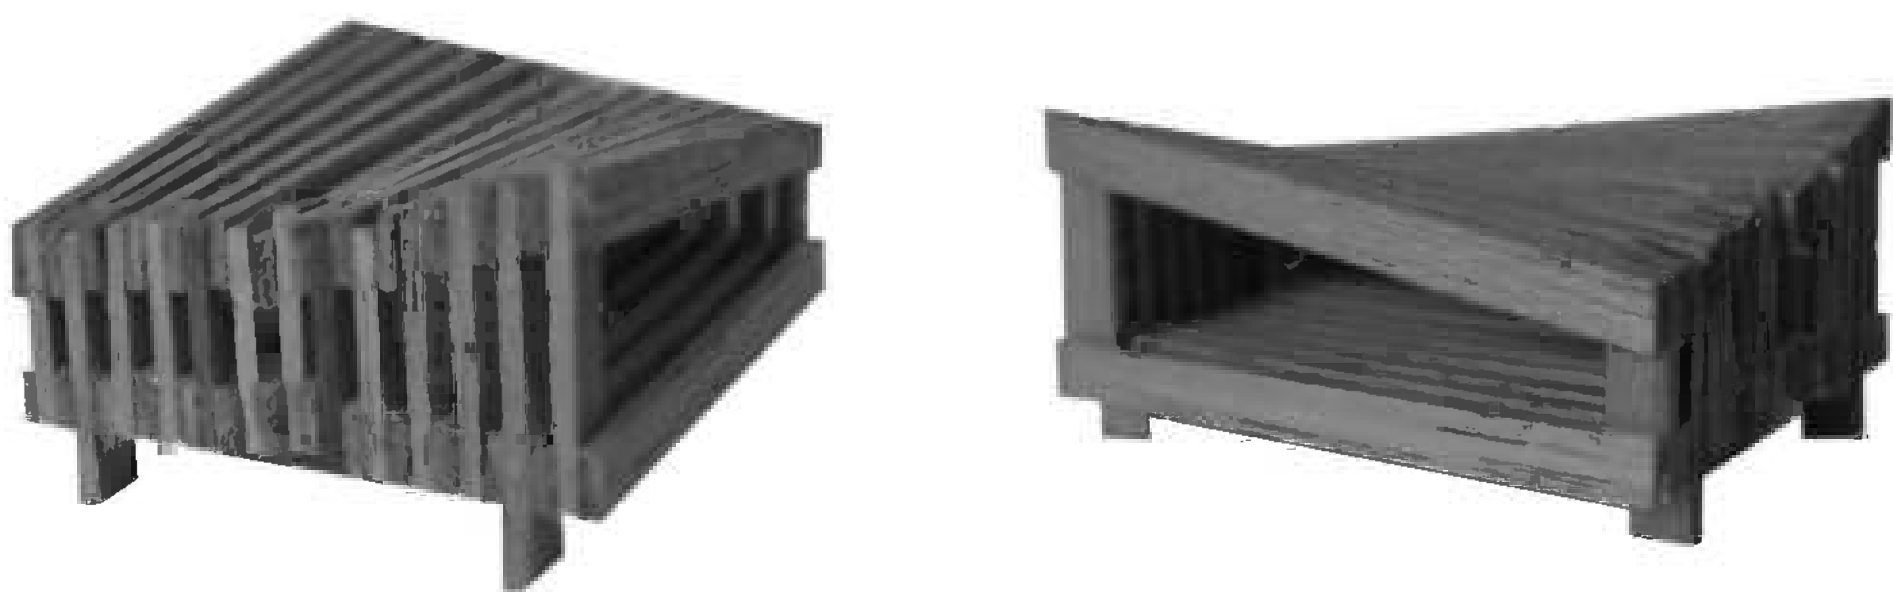

But why?
Because attraction are all ready there. You can go swimming. You can go to Austria. You can go to Bratislava. You can go cycling. You can do it all.

How
I want to build non profit organization which will be situate in Devinska nová ves. This organization will run web page and put some advertisement on facebook. People can come to spend some days in Sanberg. It will be totally free, only think you have to do is 3houers of work. After that you will be free. You could borrow bicycle, or something else. You just enjoy yourself and met some people from different places.

Build
Only think which have to be build by company would be cultivation of old funicular. On bottom would be build just platform. On this platform you can get only by rope bridge. This space would be use for storage of public bicycles and chill. On the top part of funicular will be little cottage. Building will use old structure and will be very simple. Just 5 double beds and 4 normal, toilets showers and little kitchen, which can be open to space.

Communism

Communism is one of the biggest mistakes of 20.century. Idea of socialism shows up as death end. This stop moving of our region. We are talking about awful system which ruin life of our fathers.

Internet

Virtual space. The biggest invention of our days. Social network, which is connecting world. And socialism start to work. You can share photos on flicker and your wisdom on wikipedia. This influence society. We are facing new structure of our society.

⬆ end of structure 1:200

Wikipedia, Flickr, Facebook and Twitter aren't just revolutions in online social media. They're the vanguard of a new cultural movement. Forget about state ownership and five-year plans. A global collectivist society is coming-and, this time round, you're going to like it.
The new socialism, Kevin Kelly, Wired, 2009, London
